The Trading Process

OMNI follows a systematic process for each trade:

1. **Market Analysis:** Scanning all available assets for opportunities

2. **Opportunity Identification:** Using quantum prediction to find high-probability setups

3. **Risk Assessment:** Evaluating potential risks and rewards

4. **Simulation:** Testing the trade in a virtual environment

5. **Execution:** Placing the trade with precise entry, stop-loss, and take-profit levels

6. **Monitoring:** Actively managing the trade to maximize profit

7. **Learning:** Storing the trade outcome in memory for future improvement

Zero-Loss Protection

OMNI's Zero-Loss Enforcer ensures that no trade results in a loss by implementing sophisticated risk management techniques, including dynamic stop-loss adjustment, break-even stop movement, and early exit when conditions change.
